

What is Conditional Exceedance?

A non-parametric way to ask: when X makes a big move, how often does Y follow?

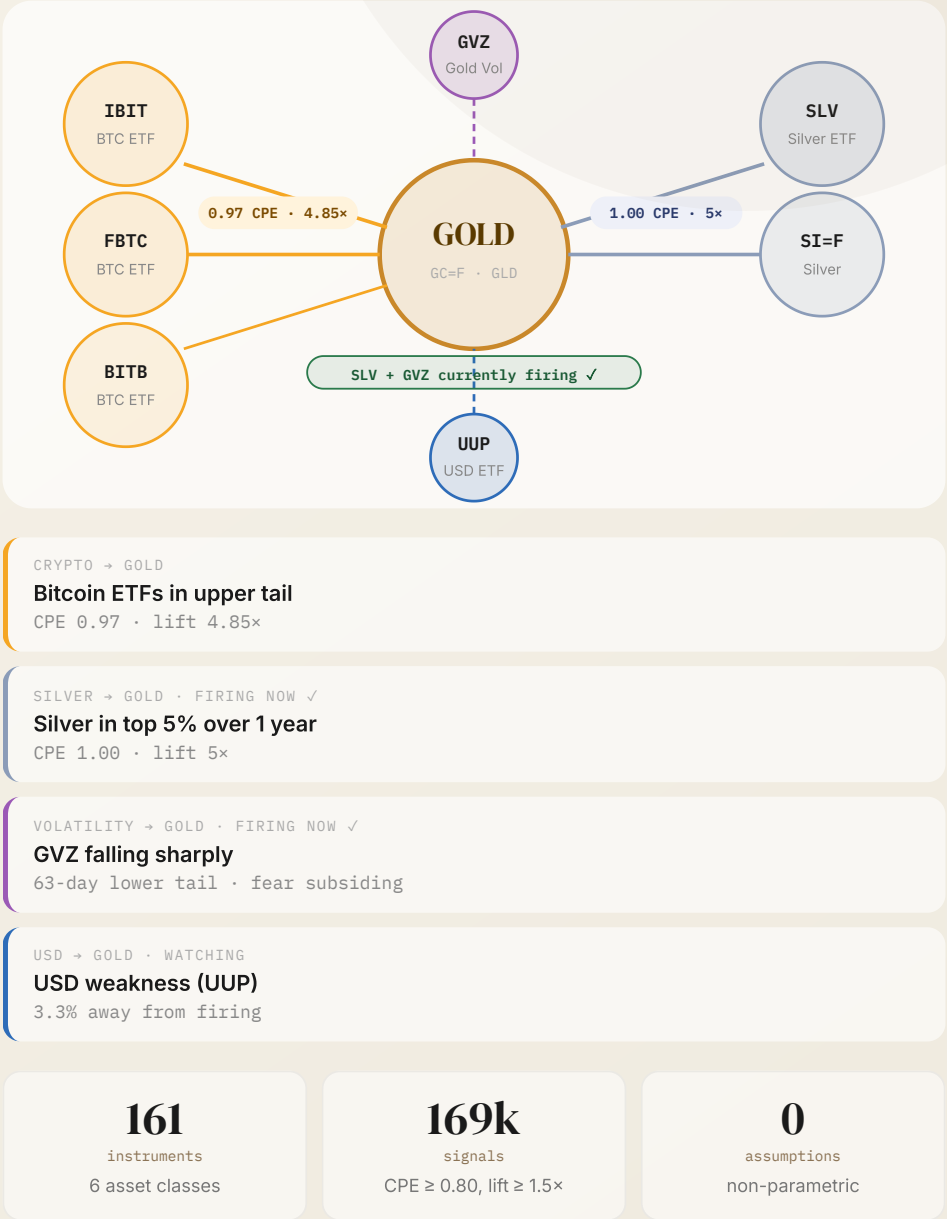

$CPE = P(\Delta Y_f > r_{qY} \mid \Delta X_p > r_{qX})$

No model. No assumptions. Just a count from history.

When crypto runs, gold follows.

The Multi-Asset CPE Atlas maps tail co-movement across 6 asset classes.

Should you buy gold today?

The framework applied to a real daily decision — updated every trading day.
