

TODAY'S REGIME — PLAIN ENGLISH SUMMARY

The current cross-asset regime **favours 📈 FX** — CPE signals show historically elevated conditional probabilities of large moves at the 1–3 month horizon. The regime is **cautious on 📊 Bonds** — bearish CPE signals dominate at the 3-month horizon, suggesting historical tail conditions that precede weakness.

1188 predictors in tail regimes

📊 Bonds: UNDERWEIGHT at 3mo

📈 FX: TILT UP at 3mo

Research Disclaimer: All CPE values are within-sample empirical frequencies computed from historical data (1993–2026). The tilt labels, suggested weights, and regime scores are descriptive summaries of historical tail co-movement patterns — not forecasts or investment advice. Neutral weights are derived from long-run historical Sharpe ratios (rf=0, 10-year lookback) and are not optimal in any mean-variance sense. Past statistical structure does not guarantee future behaviour. This dashboard is for personal research only. Always consult a licensed financial adviser before making investment decisions. · **Dr. Arun Ramanathan** · zenodo.org/records/20606184
